

## 4/2 and 4/3 Solenoid Directional Valve, ISO Size 05

 $Q_{max} = 90 \text{ l/min}, \quad p_{max} = 315 \text{ bar}$ Two-stage design, with EX-safty solenoid coil Series EEX-WEV...

#### Valve:

- · Slip-on coil design, coils can be changed without opening hydraulic envelope
- · With manual override
- Interface to ISO 4401-05-04

#### Solenoid coil:

- To IEC/EN 60079-0, IEC/EN 60079-7, EN 60079-18 To EN 60079-31
- · For equipment in Category 2

#### 1 Description

Series EEX-WEV...-10 high performance spool valves are two-stage units which use the follower spool principle. The main valve components are a steel body, a spring-centered follower spool assembly and wet armature solenoids with pressure-tight core tube and a slip-on coil which is certified for use in explosion-hazard areas. The coil slips over the core tube and is retained by a knurled nut. The solenoid housing is made of aluminium with spray painted finish. The solenoid armature is of the oil-immersed type. The coil winding is vacuum encapsulated and as a result has a high operational reliability. The coil terminal box is threaded M20X1,5 for cable diameter from 6 ... 12 mm for a cable entry gland. Valves are supplied complete with cable entry gland but without cable. The valves provide reliable service even under the severest operating conditions such as high flow rates, high operating pressures, long periods without switching and large temperature fluctuations. The highly effective spool actuation method combines the advantages of both direct acting and two-stage solenoid valves, without incurring the well known disadvantages of either type. The main spool is offset by both the solenoid force and the P - T \*) pressure difference inside the valve. The greater the P - T pressure difference, the grea-ter the offsetting force. It is brought back to its deener-

gised position in the same way, using the P - T pressure difference and without the need for heavy centering springs.\*) The pressure in P must exceed that in T and the valve must be connected in the conventional manner i.e. presssure to P, T to tank.

Ex: solenoid conforms to the European standards IEC/EN 60079-0, IEC/EN 60079-7, EN 60079-18 EN 60079-31

Gas:

e: increased safety m: encapsulation Group II: for use in the potentially explosive area T4: temperature class for gas

#### Dust:

t: protection by enclosure Group IIIC: use in areas with combustible dust T120 °C: temperature class for dust

#### 2 Technical data

General characteristics	Description, value, unit
Designation	4/2 and 4/3 solenoid directional valve
Design	manifold-mounting, two-stage
Mounting method	4 x Ø 6,4 holes for M6x60 cap screws
Tightening torque	9 Nm ± 10 %
Size	size 05 interface to ISO 4401-05-04 / DIN 24 340 A10

Reference: 400-P-191110-EN-04 Issue: 06.2021

General characteristics		Description, value, unit		
Weight		3.9 kg (1 solenoid) 4.7 kg (2 solenoid)

#### IMPORTANT!:

The less favourable values from the hydraulic and electrical characteristics determine the temperature range of the whole valve.

#### IMPORTANT!:

<sup>2)</sup> The maximum fluid temperature must not exceed the permissible ambient temperature for the whole valve.

## 4 Performance graphs

measured with oil viscosity 33 mm<sup>2</sup>/s (cSt), coil at steady-state temperature and 5 % undervoltage

 $\Delta p = f(Q)$  Pressure drop - Flow rate characteristic A / B, D, G and H spool

 $\Delta p = f(Q)$  Pressure drop - Flow rate characteristic A / B, D, G and H spool

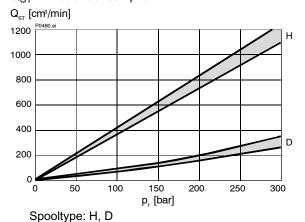

#### **IMPORTANT!**

The quored max. flow rates apply when symmetrical flows pass through the valve.

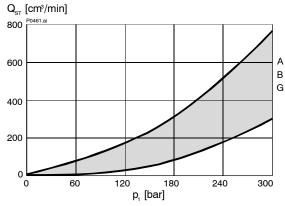

For non-symmetrical flows, the max. flows are substantially reduced, in worst cases to only 25 % of the above valves.

### 5 Installation information

#### **COMMISSIONING**

 The solenoid coils must only be operated when they are fitted on the associated valve. For more information on installation and commissioning, please refer to the operating instructions supplied with the solenoid coil.

#### ATTENTION!

Ratings given in the operating instructions
Pay attention to the relevant operating instructions from the solenoid coil! If in doubt, the less favourable values apply.

#### ATTENTION!

Only qualified personnel with mechanical skills may carry out any maintenance work. Generally, the only work that should ever be undertaken is to check, and possibly replace, the seals. When changing seals, oil or grease the new seals thoroughly before fitting them.

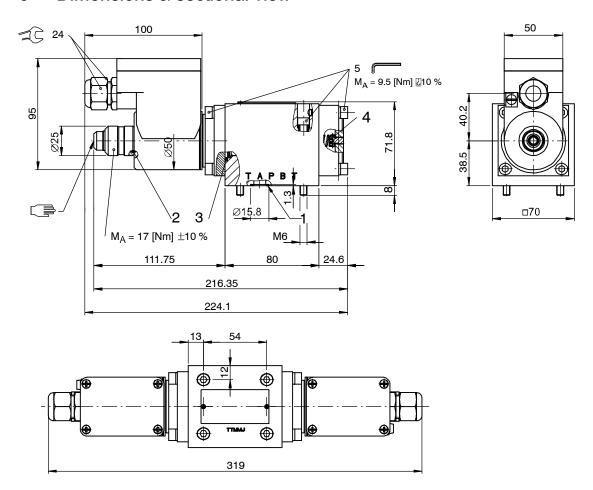

#### ATTENTION!

#### Authorised persons

The tasks described here may only be carried out by authorised personnel. Authorised personnel are those who have electro-technical training (EN 60204-1).
